

Shini with the best

Top companies in plastic industry are using SHINI products.

It is a common trend in plastics manufactures that all companies seek for cheaper solution in production. There are few ways to make process more effective and in this same economical, depending on needs and companies mission. Buying auxiliaries equipment in small manufactures might be called an investment and optimize the production. With big manufactures investment is a current process and it is based on autoimmunization as many as possible.

Central conveying systems is one of the ways on autoimmunization in order to make process more efficient. This solution is mainly adapted in big manufactures and they gain following profits:

- energy and labor cost optimization
- possibilities of further expansion as needed in modular system
- centralization of process management
- precise stock management, continuous controlling of raw material usage
- pneumatic material feeding without contamination or dust in raw material
- no material lost and repeatability of mixture
- faster production cycles and production stabilization
- lack of employees mistakes what decrease production downtime
- ability to support process of any performance
- Conveying different materials: powder, dust, re-grind, flakes

SHINI Plastics INC, as the one of the global manufactures of auxiliary equipment, obviously has such product as central conveying systems. SHINI provides complete solution for different manufacture branch like: packaging, medical, electronic and electrical. SHINI develops range of this products and system in order to fill needs of every customer require, including standard simple products as well as more complex and bigger projects.

Central conveying systems are made of high-quality long-lasting and low energy consumption components. Modularly constructed, supporting or manufacture process, provide complete solution for effective material consumption.

Selected companies using SHINI products

Johnson Controls, Namestovo, Slovakia

Johnson Controls it is world-class leader in diversifying technology for industry, providing customer service in over 150 countries. Company operates mainly in automotive and contracted industries. Team of 150 000 staff creates high-quality products, service and solutions to optimize efficiency of energy and maintenance of buildings, constructed of lead-acid car accumulators and advance batteries for hybrid and electric vehicles.

Hella Slovakia Signal-Lighting, Banovce, Slovakia

Company is a part of German Hella Group – leading supplier in automotive branch. Hella company is on the market for over 100 year and it is a leader of innovative solution in the field of cars accessories. Company provides products and modular systems in the fields of electronics and lighting systems. Hella is one of the 100 largest German companies, employees over 24 000 people all over the world. Hella products meet the highest requirement of quality management and environment certified according to ISO 9001:2000, ISO/TS 16949:2002 and ISO 14001

Jasplastic, Galanta, Slovakia

Company deals with injection process, operates also in the field of polystyrene, production of plastic and also transportation. Company works on 52 Injection molding machines from 40 tons to 2300 tons installed in 2600 m² halls. Company has also warehouses with a storage facilities 6100 m². Company was established in 2001 and from 2003 started to make a production from polystyrene. Currently company employees over 8000 employees and cooperate with such brand as Samsung and Sony.

Wavin, Kostelec, Czech Republic

Wavin Ekoplastics is a leader in solution for piping systems employees over 350 people. Company provides modern systems solution including: pipes for hot and cold water, under floor heating and plumbing, system for rainwater, roof drainage. Wavin Group is a network distribution and dealers worldwide. Group is present in 27 countries in Europe also has offices in China, Australia and New Zealand. Employees 5000 people with annual turnover about 1 mld euro.

AUO, Trencin, Slovakia

AUO provides customers full range of LCD screen to the customers from 1.2 " till 71 ". As one of the leader AUO invests in modern technologies and pay a lot of attention to surveys and development of LCD technologies. AUO constantly improve technologies solution with manufacture process in order to gain efficiency and reduce environmental pollution. Group currently employees over 42 000 employees in Taiwan, China, Japan, Singapore, South Korea, USA and Europe.
