

SD-H

Honeycomb Dehumidifier

Advanced PID controller

gives a possibility to set up drying time for each day

Dew point monitor

gives a possibility to check current dew point of drying air (optional)

Measurement point

gives a possibility to fast measure of current dew point by using portable dew point device (optional)

Siemens contactors

from Sirius series ensures uninterrupted operation of the machine components

Molecular sieve

low and constant dew point temperature to -40°C

Set of filters

ensures safety and clean dry air stream

Ring blowers

guarantee the correct flow of air, required for drying and dehumidification process

Heat exchanger

provides a fast cooling down of the molecular sieve after the hot regeneration process
