

# SG-36/43

## Central Granulator

### Cyclone dust separator

can effectively remove the air from regrind and facilitates material collecting

### Fixed and rotating blades

Hardness 56HRC, steel SKD11

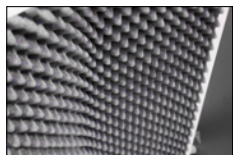

### Rotating blades

"V" arrangement ensures high cutting efficiency

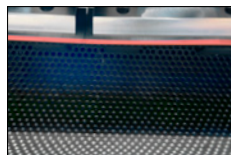

### Profile

designed for quick blade replacement with easy rotating blades adjustment

### Low noise structure

ensures low noise level

### 10 mm screen as a standard

optional 6,8,12, 17 mm

### Colling cutting chamber

ensures easy low temperature material granulating

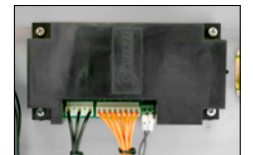

### WEG motor

energy-saving, IE2 class

### Phase sequence sensor

ensures correct direction of the main motor rotation

### Large weight of fly wheel and shaft

can increase inertia, thereby increasing the cutting ability of bigger elements

### Full receive alarm

device informs about granulator overloading
